Taking you higher

CONCORD escalator represents and incorporates safety, reliability, trendy, novel, and innovative streamline designs and models, adding to the elegance of the products.

CONCORD escalator installations have an imposing presence and blends into the architecture of the properties they are installed in.

CONCORD escalator implements an overall elevation towards the product design and production. The application of high technology, speeds up the steps of updating and upgrading of the products. The guide rail is pre-installed with the host mechanical system. The compact design of the handrail drive system reduces the escalator size and more effectively utilizes the building space

CONCORD Moving Auto Walk represent and incorporate safety, reliability, trendy, novel, and innovative streamline designs and models, adding to the elegance of the products.

CONCORD Moving Auto Walk implements an overall elevation towards the product design and production. The application of high technology, speeds up the steps of updating and upgrading of the products. The guide rail is pre installed with the host mechanical system. The compact design of the handrail drive system reduces the moving auto-walk size and more effectively utilizes the building space

CONCORD Moving Auto Walk installations have an imposing presence and blend harmoniously into the architecture of the properties they are installed in.

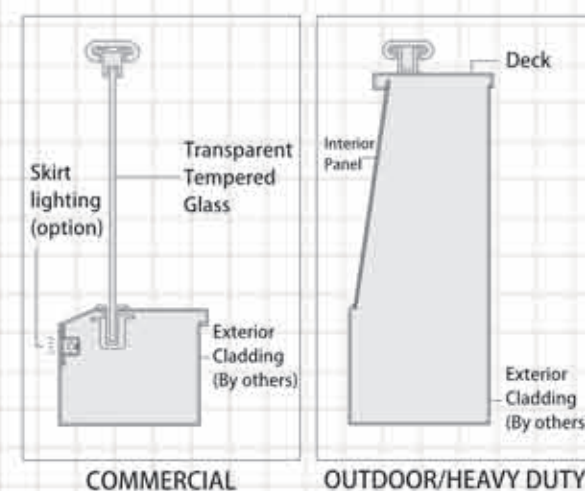

CONCORD Escalators and Moving Walks

CONCORD escalators and moving walks are an outstanding class of people moving systems. They offer a streamlined touch of styling and proficiency while addressing the very latest in safety concerns. Their compact design allows them to be placed in minimum sized wellways and that provides you with the flexibility you need to make the most efficient use of your valuable building space. Our complete line up includes the Millennium, H-series, Modular escalators and pallet type moving walks. One of them will be the ideal answer to your pedestrian-traffic needs.

The latest models are Millennium escalators, which are new generation escalators that are controlled by Microprocessors and are ergonomically designed to give a very smooth ride. The new design provides a marked improvement by minimizing the front and back step movement in the down direction. This eliminates the jerk people may experience when going down in a escalator. The style of newel face is also quite a new modernized one.
